- Intro
  - Me
  - What VoIP, SMS, MMS are
  - Why use them when we have smart phones?
- VoIP providers
  - Tropo, Twilio, Plivo
  - How they work
    - Create an account
    - Create a web app to serve scripts
    - Each has their own format
    - Workflow
  - Requires programming know-how and locks you into a specific service
  - So far, none of these support MMS
  - OpenVBX from Twilio, maybe demo later
- SMS/MMS email gateways
  - Converts message into emails, no data plan needed
  - Many carriers provide this functionality already
  - Adds branding that you need to filter
  - You can also create your own sms/mms gateway
    - EnvayaSMS, SMSSync
    - Install android app
    - Write gateway web app
    - Workflow
    - Use cases
- VoIP Drupal
  - Center for Civic Media
  - Abstract away differences between services
  - Take advantage of drupal's capabilities
  - Demo VoIP Adventure
  - Show code
- Vojo
  - Center for Civic Media
    - Mobile blogging with VoIP and SMS/MMS
    - History
    - Geolocation, Groups, Broadcast
  - Demo
  - Launch at AMC in Detroit in June
